

UV Flatbed

Our Varia Dot imaging technology, as low as 6 picoliters, breaks the image quality barrier in inkjet printing.

## Direct to Substrate!

With our new UV flatbed technology, we can produce high quality POS materials, fabric, exhibit graphics, wallcoverings and more at 1440 x 1440 DPI. With the ability to print white ink, you can print these near photographic images on virtually any rigid or flexible material no matter how diverse the need. From doors to ceiling tiles, you name the material and we'll find a way to print it!

254 N. Emmer Lane Milwaukee, WI 53233
